

Connect with us to discover how AI can transform your business.

**Service offering:
AI LAUNCHPAD**

From insight to
implementation.

Your Enterprise AI Architect.

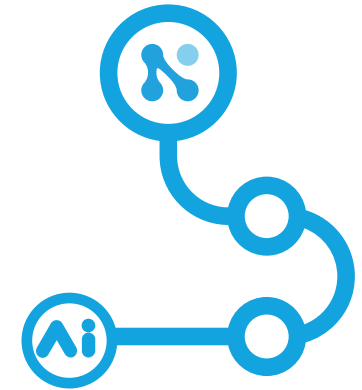

The application of Artificial Intelligence (AI) in the business world is no longer an option, but a necessity. AI enables companies to maximise efficiency, improve customer experience and creates new, innovative products and services. Recognizing that AI is essential for future success and adopting a horizontal approach that focuses on developing overall organizational competencies is a key step towards AI success.

What we offer: 3 to 6 Month AI Implementation Program

Our program helps our customers understand, use and apply AI, its capabilities and limitations, so that they can take advantage of the benefits the technology offers in the depth they need.

Our offer is built upon **three pillars**

Organisational competence development

- Education: personalised training programs targeted for the Management and AI Ambassadors*.
- Definition of Roles and Ambassador Program: integrating AI competencies into the organisational structure.
- Definition and sharing of best practices: a collection of practical examples and best practices and sharing them within the organisation.

Use cases

- Identifying specific AI application areas and relevant use-cases with measurable business value through workshops and interviews.
- Implementation of selected and agreed use cases on existing tools, specification of improvements where necessary
- Monitoring of usage for measuring business value and providing feedback.

Tooling

- Rendering of the necessary technology infrastructure and tools available to support AI projects, including the acquisition of new tools or upgrading of existing ones.
- Life cycle management of the selected and used tools.

* Ambassadors are selected co-workers who pioneer in AI usage and thus help the entire organisation understand and work with AI..

Use cases

Industry: banking
Client: large retail and commercial bank

Case: Automatic processing of unstructured, non-standard regulatory, supervisory and authority data necessitates using generative AI tools and RPA solutions, including task identification, extraction of named entities and classification of cases.

Benefits: faster response to authorities, higher throughput.

Industry: telecom, IT
Client: CETIN Hungary, telecom and IT infrastructure and solutions provider

Case: Organisational transformation and training program related to the introduction of AI. The program included the education of top and middle managers, development of AI ambassador and AI "SWAT team" concept, training and mentoring of ambassadors and AI experts, and implementation of Microsoft Copilot and Microsoft Azure AI ecosystem.

Benefits: greater organisational acceptance, more productive use of tools, greater efficiency at work.

Industry: pharmaceutical industry
Client: Richter Gedeon, an international pharmaceutical research and manufacturing company

Development of an information retrieval and synthesis tool operating on large amount of scientific research documentation and publications to help define research objectives and support scientific research activities using generative AI tools.

Benefits: more accurate research target identification, increased scientific publication coverage, faster research process.

Unlocking Innovation with Generative AI

In the dynamic landscape of enterprise AI, a recent breakthrough has emerged: the widespread adoption of Generative AI and Large Language Models (LLMs). These cutting-edge technologies are revolutionising how businesses operate, enabling transformative shifts across industries. As an official partner of Microsoft, Neuron Solutions stands at the forefront of this AI revolution. Our team possesses deep expertise in Microsoft's AI ecosystem, including the strategic utilisation of Microsoft's Generative AI frameworks and tools. With this knowledge, we craft tailor made solutions that precisely address your company's unique challenges and needs.
